Dear Sir/Ma'am,

Application for Digital Solutions Internship

I would like to express my interest for the Digital Solutions Internship. I am currently in my second year of studies in Singapore Management University, pursuing an undergraduate degree in the School of Information Systems.

As a Year 2 student, I am well-versed with Python (with a grade of A+), Front-End Development, and industry-grade Web Application Development Frameworks such as Django and Flask. I am also acquainted with analytical tools such as Tableau, SAS Enterprise Guide, and Quantum Geographic Information System. I am comfortable working within a Unix-based Command-Line environment.

I have experience in hosting and deploying web applications with Amazon EC2 and DigitalOcean.

Majoring in Smart City Management and Technology, I have also acquired knowledge beyond the technical and realm but also analysing issues from societal, geographical and environmental dimensions, which I believe is much in line with DNV GL's objective of conceiving safer, smarter, and greener solutions.

In my previous internship with DA.PO Augury last summer, I was in charge of designing and developing digital solutions for clients such as Audi and Bank of China. As DA.PO Augury is a small firm and had limited manpower, I was required to constantly switch between UI/UX Designer, Front-End, and Back-End Developer roles, despite my stated role as "UI/UX Designer, Front-End Developer".

I also needed to learn and implement new technologies, tools, and libraries under the constraints of limited manpower and time. This experience granted me the versatility and ability to learn and adopt new technologies within short periods of time.

Thank you for reviewing my application. While I definitely do not have as much technical expertise as the Digital Development team, I am eager to contribute as much as I can to the company and to the team through my resilience and capacity to learn.

Yours Sincerely,
Wayne Loh
